

A Aligned views

p : "top right"

$$x' = A^x(x)$$

$$y' = A^y(y)$$

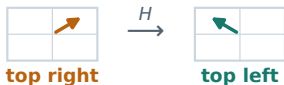

Prompt view

$p' = T_H(p)$: "top left"

Aligned triplet

Appearance: image only

B Direction action

$$T_H(d_x, d_y) = (-d_x, d_y)$$

Mappings for "top right"

horizontal flip **top left**

vertical flip **bottom right**

90° CCW **top left**

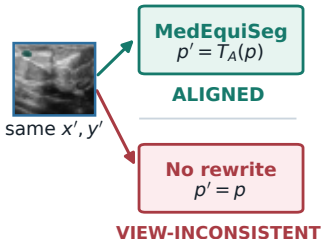

Compose, then lexicalize

Atomic phrase handling
"upper right" maps once

C Matched no-rewrite control

Matched across both runs

same model, initialization, optimizer
same order and $A_{c,e,s}$ plans

No rewrite
 $p' = p$

Isolated factor

only rewrite differs

Tests prompt validity without
assuming an accuracy gain
